Remarks

: (For DFS-500 series)

Pattern number 9973 is set using the PATTERN/KEY PAD button on the control panel. After that, the freeze operation of an FRGD image can be controlled using the above command only when the effect of an animation type is set. To return a BKGD image to the freeze mode, enter pattern number 9971. During the power-on sequence and power reset, the system is initialized so that the BKGD image is frozen.

(For DFS-300 series)

Basically, same as the DFS-500 series.

In the DFS-300 series, the BKGD freeze and FRGD freeze can be selected by the pattern number described above or the setup menu. (For more details of the setup menu, refer to the Additional Functions of the DFS-300/300P (Operating Instructions.)

2-7. SNAP SHOT REGISTER

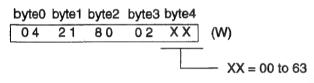

2-7-1. Configuration of Snap Shot Register

The DME switcher of DFS series has 100 snap shot registers of Nos. 00 to 99 (20 snap shot registers of Nos. 0 to 19 for DCK-500 and DCK-500P). One snap shot register consists of 16 groups. The number and size of groups used vary depending on the switcher model or the type of a parameter memorized in the snap shot. In this case, 16 groups are not all used. (In the DFS series, groups 1 and 2 or groups 1 to 4 are used.)

To upload or download the contents of the snap shot register in DFS and DCK to the controller, transfer data in units of this group. Therefore, the controller first issues a GROUP READ command to the DFS and DCK, views the contents of the group tally from the DFS and DCK, and specifies a valid group number so as to read the contents of snap shot data. To fetch the contents of the snap shot register that uses four groups (groups 1 to 4), the contents are read four times for each group.

2-7-2.Learn

Command: LEARN

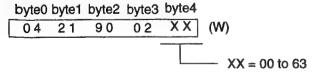

Byte 4(XX) represents the snap shot number in hexadecimal.

Function

: Registers the snap shot.

2-7-3.Recall

O Command: RECALL

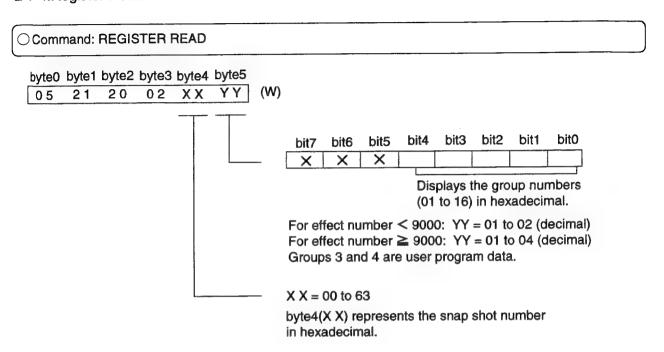

Byte 4(XX) represents the snap shot number in hexadecimal.

Function

: Calls the snap shot.

2-7-4.Register Read

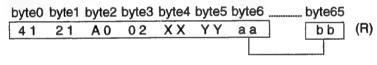

Function

: Reads the contents of the snap shot register.

DFS or DCK returns the return parameter (REGISTER WRITE) when a REGISTER READ command (the snap shot number is specified by byte4 and the group number is

specified by byte5) is issued to DFS or DCK.

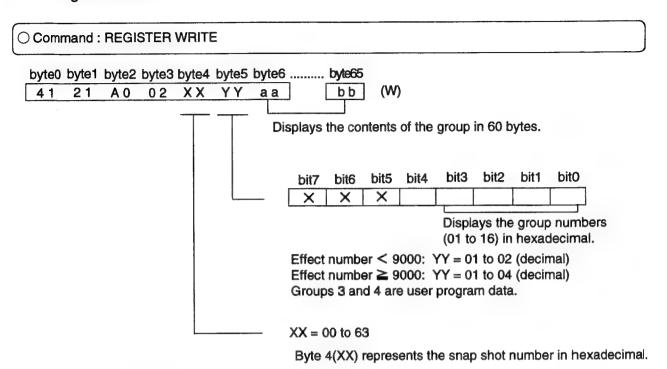

Return parameter: REGISTER WRITE

Displays the contents of the group in 60 bytes.

The contents of byte4 (XX) and byte5(YY) are the same as a REGISTER READ command.

2-7-5.Register Write

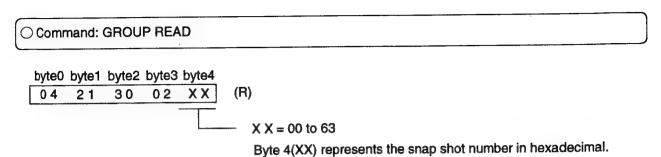

Function

: Writes the contents of the snap shot register. (The snap shot number is specified by byte 4, and the group number is specified by byte 5.)

Note

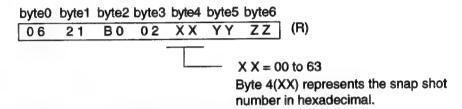

During write operation, data should be sequentially sent from group 1.

Function

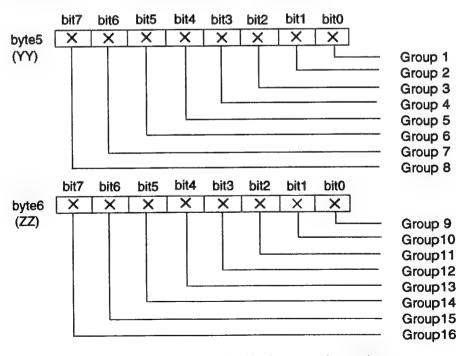

: Checks the block configuration of snap shot data. DFS or DCK returns the return parameter (GROUP TALLY) when a GROUP READ command (the snap shot number is specified by byte 4) is issued to DFS or DCK.

Return parameter: GROUP TALLY

Byte 5(YY) and byte 6(ZZ) indicate the valid group contained in the snap shot register that is specified by byte 4(XX).

For effect number \leq 9000: Byte 5(YY) = 03, Byte 6(ZZ) = 00 For effect number \geq 9000: Byte 5(YY) = 0F, Byte 6(ZZ) = 00

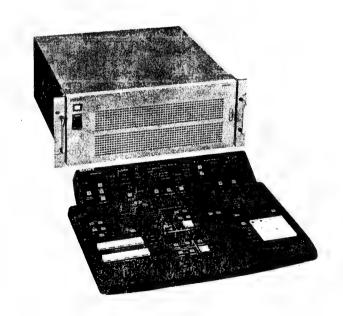

X = 1 indicated the valid group contained in the snap shot register.

SERVICE MANUAL

SAFETY CHECK-OUT

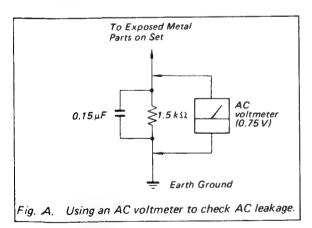

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

Check the metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA. Leakage current can be measured by any one of three methods.

- A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments
- A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
- 3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2 V AC range are suitable. (See Fig. A)

1-14. NOTES ON SPARE PARTS

1-14-1. Notes on Spare Parts

(1) Safety Related Cmponents Warning

Components marked with $\underline{\mathbb{A}}$ on the schematic diagrams, exploded views and electrical spare parts list are critical to safe operation.

Replace these components with Sony parts whose part numbers appear in this manual or in service bulletins and service manual supplements published by Sony.

(2) Standardization of Parts

Spare parts supplied from Sony Parts Center may not always be identical with the parts actually in use due to accommodating the improved parts and/or engineering changes or standardization of genuine parts.

This manual's exploded views and electrical spare parts list indicate the part numbers of the standardized genuine parts at present.

(3) Stock of Part

Parts marked with "o" in the SP(Supply code)column of the spare parts list are not normally required for routine service work. Orders for parts marked with "o" will be processed, but allow for additional time for delivery.

(4) Units for Capacitors, Inductors and resistors

The following units may be assumed in schmatic diagrams, electrical parts list and exploded views unless otherwise specified.

Capacitor: μ F Inductor : μ H Resistor : Ω

1-14-2. Replacement of Chip Parts

Required Tools

Soldering iron: 20W

If possible, use a soldering-iron tip

heatcontroller set to 270 ± 10°C.

Braided wire : Solder Taul or equivalent

Sony part No. 7-641-300-81

Solder

: 0.6mm dia. is recommended.

Tweezers

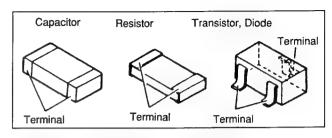

Soldering Conditions

Soldering iron temperature : 270 ± 10°C

Soldering time

: Less than 2 seconds

per pin

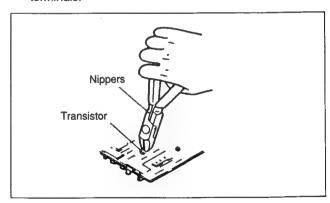

Replacement of Resistor and Capacitor

- Place the soldering-iron tip onto the chip part and heat it up until the solder is melted. When the solder is melted, slide the chip part aside.
- Make sure that there is no pattern peeling, damage and/ or bridge around the desoldering position.
- After removing the chip part, presolder the area, in which the new chip part is to be placed, with a thin layer of solder.
- Place new chip part in the desired position and solder both ends.

NOTE: Do not use a chip part again once it has been removed.

Replacement of Transistors and Diodes

- 1. Cut the terminals of the chip part with nippers.
- 2. Remove the cut leads with soldering iron as above.
- Make sure that there is no pattern peeling, damage and/ or bridge around the desoldering positions.
- After removing the chip part, presolder the area, in which the new chip part is to be placed, with a thin layer of solder.
- Place new chip part in the desired position and solder the terminals.

neplacement of ICs

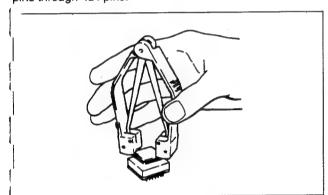

- Using the braided wire, "SOLDER TAUL" (Sony Part No. 7-641-300-81), remove the solder around the pins of the IC-chip to be removed.
- While heating up the pins, remove the pins one by one using sharp-pointed tweezers.
 - Make sure that there is no pattern peeling, damage and/ or bridge around the desoldering position.
- After removing the chip part, presolder the area, in which the new chip part is to be placed, with a thin layer of solder.
- . Place new chip part in the desired position and solder the nins

-14-3. Removal of PLCC IC

PLCC socket Extracion Tool

ony Part No. J-6035-070-A

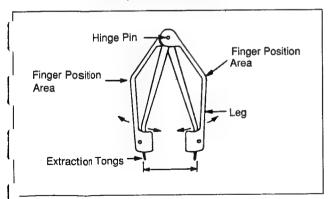

nis extraction tool is useful for extracting the IC (PLCC type) userted into an IC socket, and fits all sizes of ICs from 20 pins through 124 pins.

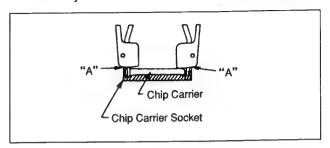

NOTE: Do not try to pull chip carrier out of sccket and let the tool action pull it out. Do not squeeze harder than necessary, only enough that the tool action occurs.

THou to use the Extracion Tool]

. Spread or compress the tool legs so the tongs will fit into the solts of the chip carrier socket.

Insert the tool tongs into the slots of the carrier socket. Puch fully in so that the tool butts on the socket at "A".

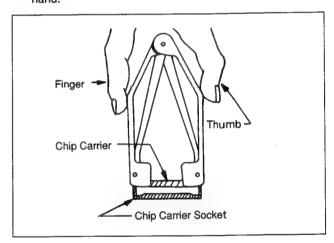

Place the thumb and the first and second finger on the ribbed area of the tool. Maintain a small downward force to keep the tool butted on the socket.

Squeeze the thumb and finger together so that the tool legs tend to straighten.

This action will draw the chip carrier out of the socket and grip it within the tool legs.

Maintain the squeezing action so as to hold the chip in the tool, hold the tool over your other hand and relax the squeeze. The chip will fall out of the tool and into your hand.

1-14-4. Replacement of Backup Battery

DFS-500 has a backup battery (Nickel-Cadmium Battery) on the SY-172 board.

This backup battery can register the settings on the control panel (snap shot) and store the effets created by user (user program).

Backup Battery: Nickel-Cadmium Battery

Sony Parts No. 1-528-202-11

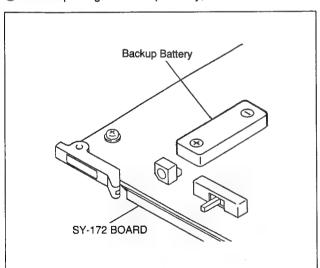

NOTE: This backup battery is charged automatically on normal operation for about eight hour. If it is not used for long time (about more than one month), the backup battery consumes. As a resalt, the following setting (1) through (4) and data is disappeared, and they are initialized. At that time, charge the backup battery.

- (1) Resume function (The setting recovery when turning the power OFF.)
- (2) Data of user program
- (3) Data of snap shot
- (4) Direct pattern assign function

If the unit serves for about five year, the backup battery should be replaced. At this time, the following setting (1) through (4) and data is disappeard, and they are initialized. After replacement, charge the backup battery.

Replacement Procedure

- ① Remove eight screws (+PTTWH 3×6), and remove the shield plate.
- ② Unsolder two soldering parts, and replace the backup battery.
- 3 After replacing the backup battery, and solder it.

1-14-5. Replacement of Fuse

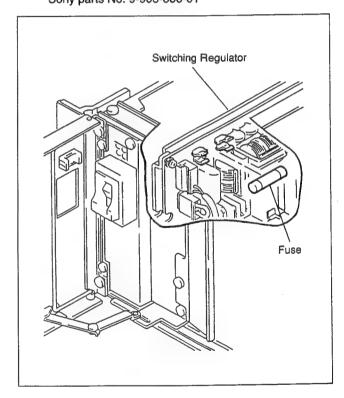

The fuse is mounted on the switching regurator. This fuse melted when the too much electric current flows by unusual instrument.

Before replacing the fuse, check the trouble of fuse.

Replacement Procedure

Before replacement of Fuse, take out the cause of short for unit.

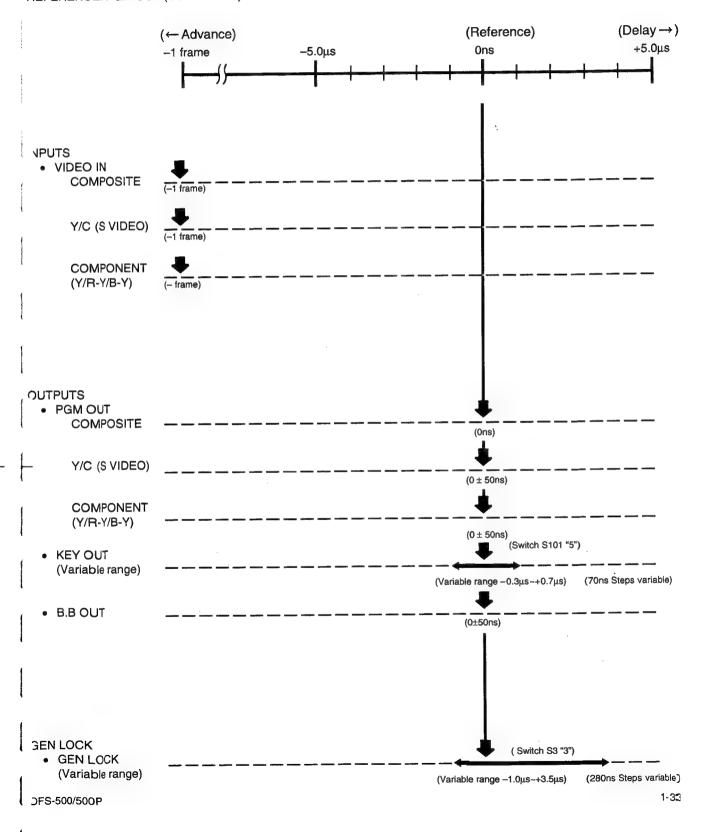

- ① Remove the top panel. (Refer to "Section 1-1 REMOVAL OF CABINET" Top Panel.)
- ② Remove the fuse on the switching regurator from the holder.
- ③ Replace a new fuse. Fuse: (for UC) GGL10 250V10A Sony parts No. 9-903-804-01 Fuse: (for EK) S506-6.3A COLOR Sony parts No. 9-903-806-01

SECTION 8 SPARE PARTS

8-1. NOTES ON SPARE PARTS

(1) Safety Related Coponents Warning

Components marked with Λ on the schematic diagrams, exploded views and electrical spare parts list are critical to safe operation.

Replace these components with Sony parts whose part numbers appear in this manual or in service bulletins and service manual supplements published by Sony.

(2) Standardization of Parts

Spare parts supplied from Sony Parts Center may not always be identical with the parts actually in use due to accommodating the improved parts and/or engineering changes or standardization of genuine parts.

This manual's exploded views and electrical spare parts list indicate the part numbers of the standardized genuine parts at present.

(3) Stock of Part

Parts marked with "o" in the SP(Supply code)column of the spare parts list are not normally required for routine service work. Orders for parts marked with "o" will be processed, but allow for additional time for delivery.

(4) Units for Capacitors, Inductors and resistors

The following units may be assumed in schmatic diagrams, electrical parts list and exploded views unless otherwise specified.

Capacitor: µ F

Inductor: µH

 $\text{Resistor} : \Omega$
